Summary

Full-stack web developer with experience in QA and modern web applications in Agile environments. Skilled in building scalable systems, implementing secure authentication, and supporting testing processes including API validation. Experienced across the software development lifecycle from development and debugging to deployment while collaborating with cross-functional teams to deliver reliable applications.

Education

Bachelor of Science in Computer Science — Lebanese International University (LIU), Lebanon **July 2025**

Professional Experience

Full Stack Web Developer Internship – The Digital Hub UNRWA – Sibline, Hybrid
Jan 2026 – Present

- Collaborated with cross-functional teams to develop and maintain multiple web applications in an Agile environment.
- Implemented secure authentication and authorization mechanisms including token-based authentication and role-based access control.
- Participated in quality assurance processes including API validation to ensure application reliability.
- Assisted in debugging issues and improving application performance across frontend and backend components.
- Contributed to code reviews and iterative feature delivery using project management tools such as Jira and Trello.
- Assisted in database design, query optimization, and backend integration for scalable application functionality.
- Contributed to the implementation and integration of AI-powered features within web applications to enhance system capabilities.

Project Experience

Progressly — Task management tool with team collaboration| GitHub

- Developed a full-stack project management platform featuring a dashboard, Kanban task board, dependency graph, project invitation flow, role management, and task trash/restore using React, TypeScript, Tailwind CSS, NestJS, and MongoDB.
- Designed a modular backend architecture with clear service and repository separation to support scalable and maintainable development.

- Implemented JWT authentication and role-based access control (owner, admin, member) with protected API endpoints and email-based project invitations using Nodemailer.
- Validated APIs using Postman, generated demo data through seed scripts, and deployed the application using GitHub and Vercel with proper environment configuration and CORS handling.

SparkClean – Informative dynamic website (Role Based Access Control RBAC) | GitHub

- Developed a booking platform with calendar-based service scheduling and guest contact functionality using React, Next.js, TypeScript, Tailwind CSS, and Supabase.
- Implemented Role-Based Access Control (RBAC) and applied SOLID principles with the repository pattern to ensure maintainable backend architecture.
- Validated API endpoints using Postman, integrated Nodemailer for secure admin password setup, and deployed the application via GitHub and Vercel.

Ratehub – Company ratings and jobs system

- Built a full-stack platform enabling company administrators to post jobs and candidates to apply by uploading their CVs using React, JavaScript, Tailwind CSS, and Supabase.
- Implemented email verification for employees and admins using Nodemailer to enhance account security and authentication.

Portfolio – Web Portfolio | GitHub

- Developed a responsive personal portfolio website using React to showcase projects, experience, education, certifications, and provide contact functionality.

Technical Skills

Languages: *HTML5, CSS3, JavaScript, TypeScript, Python, SQL, Java*

Frontend Frameworks: *React, Next.js, Tailwind CSS*

Backend & APIs: *Node.js, Express.js, Django, NestJS, Fastify, FastAPI, RESTful API, PHP*

Databases: *MySQL, MongoDB, PostgreSQL, Supabase*

Authentication & Security: *JWT, bcrypt, Role-Based Access Control (RBAC), OAuth*

Testing & QA: Jest, Cypress, Postman, Unit Testing, Integration Testing

DevOps & Deployment: *Git, GitHub, Vercel*

AI Integration: *OpenAI API, Pre-trained Model Integration*

Methodologies: *Agile/Scrum, Jira, Sprint Planning, Clean Architecture, SOLID Principles, Team Collaboration*
